Dr. H. M. Payne's Lecture on Frozen Gravel Mining.

Dr. Payne's lecture on Wednesday evening was the best lecture given in Parker Hall this year. It was a case of a man talking on a live subject and delivering his lecture in such a way as to make every part of it entirely clear. Dr. Payne can come around as often as he pleases and be assured of a full house at each advent.

He dwelt first on the Klondike method of mining frozen gravels. He explained the thawing processes and the different parts of the immense dredges used on the gravel after it has been thawed out. The pictures were a great help in bringing out his point.

From Alaska he transferred us to the Lena gold fields of northern Siberia. He dwelt upon the characteristic Russian backwardness in all things; the "red-tape" you have to go thru; the unreasonable laws, and many other points of interest. These Siberian fields are the richest gold fields in the world. The "dirt" averages \$7.50 per cubic yd., while in Alaska it averages 37 cents per cubic yd.

The lecturer contrasted between Alaskan and Siberian methods thruout his talk, and finished by urging the student to apply himself to special research work, to be better fitted for his chosen work. Dr. Payne received an ovation at the conclusion of his lecture.

It gives us great pleasure to announce that Mr. Josiah Bridge, former instructor at the School of Mines, is one of the few who obtained a fellowship, given by the University of Chicago.

SUMMER WORK.

The question of how to spend the summer vacation to the best advantage, is one that presents itself at this time of year, to Students as well as Faculty. I will not attempt to answer it for the latter hence these remarks will apply only to the former.

It is not known who invented summer vacation for Educational Institutions but they evidently originated with someone not familiar with modern efficiency methods or "Scientific Management." The industrious student may however, overcome this inefficiency by finding laboratory work for himself in various mine, mills and smelters throughout the country. The desirability of so doing is evident. In the first place many men begin the study of Mining Engineering with little or no idea of the work required of the Mining Engineer. If, from his summer experience the student becomes convinced that he is not fitted for the profession, or that the work is distasteful to him, he will be infinitely better off than though he had acquired this knowledge later. Another advantage of summer work is that it will enable one to appreciate better the studies of the following years at school. This is especially true of work done at the end of the Junior year.

In order to stimulate and encourage practical work in the summer months, the Faculty has recently passed a resolution, "that a man may work at any mine, mill or smelter or on a geological survey for a period of 8 weeks and by handing in a suitable report on same, may obtain 6 hours credit which can be

Continued on Third Page.

The Bulletin Board.

Some time ago the student body were made aware of the thoughtlessness of a few individuals, when the bulletin board was despoiled of one of its notices. The same thoughtlessness, (or shall we call it "cussedness") is in vogue at the present time. The Miner refers to the changing of letters upon one particular poster. Were this the only cause of protest, then would it be just as well to remain silent. But it is not the first time; it is an habitual offense, and should become extinct in practice.

The man without a sense of humor is dead, or might just as well be in that quiescent state. Every one likes a good joke—even the most taciturn of us can smile at a pun, or a hackneyed "took it bodily from Judge, or Life, etc.," but only the perpetrator of the latest bulletin comedy can see wit reflected in his act.

It is beyond the realization of natural ideals to ask that the bulletin board be treated with religious sacredness. It is useless to demand that a notice remain posted in its original simplicity, but it is befitting, it is absolutely essential, that any notice, amendments, or postscripts, be at least clean in thought and expression.

A departure into the wayside filth pleases no one; even the slime digger himself has to force a smile to appreciate his sense of humor. Why be content, or why permit such acts to remain unnoticed, unpunished?

Of course, the question immediately arises, "Who did it?" Only one man can answer, and the chances are nine hundred and ninety-nine out of a thousand

that he will not.

It is then for his benefit in particular that the desire for clean wit and "horse sense" predominates among his fellow students: That he has fooled himself, in considering "Ego" as a rejuvenated Mark Twain, and as such is a failure.

We wonder if such a man would show his work to his mother, for instance. Of course not! And why? Because he would be ashamed to; because he respects her ideals. And similarly, why should he not respect his fellow students? He must, or the Missouri School of Mines is not his proper State institution to attend.

To the student body in general the Miner wishes to add the following: Perhaps some of us do not grasp the somewhat indefinite meaning of the foregoing. Agitate the subject; ask others what is referred to. Consider only an instant, and then agree that such desecration of the bulletin board is unmanly and undesired.

Freshmen Win Inter-Class Meet.

The Freshmen pulled out a hard-earned victory in the annual class-meet. They were hard pushed by the Sophomores, who came in second. The Juniors came in a poor third, leading the Seniors by a margin of seven points.

The total number of points made by each class is listed in the order they finished;

Freshmen	53½
Sophomores	46½
Juniors	16
Seniors	9

(Note.—Six points made by W. H. Kamp and C. E. Peterson of the Senior Class, and two points made by C. W. Bower, of the Junior Class, should be deducted, as these men are "M" men in track.)

In the 100-yard dash Imlay and Goodman fought it out along the whole distance. Goodman was declared the winner, altho the margin was a slight one; his time was 10 4-5 seconds. Scruby and Kamp showed good form in the 120-yard hurdles, Scruby winning the race by several feet. Murphy had things his own way in the mile, altho Charley Miller finished about ten seconds behind him; R. Dowd was third. The time was slow, 5:30 4-5.

Gill set the pace in the 440-yard dash, and was never headed. He finished in 57 3-5 seconds, and Schnaidt was second. Imlay and young Aid put on an exciting race in the 220-yard low hurdles. Aid showed fine form, but Imlay was too fast for him at the finish. Imlay's time was 29 seconds flat.

The half-mile run again saw "Murph" on top, in the fair time of 2:20 2-5. Rice and Schnaidt finished in the order named. The 220-yard dash was a repetition of the 100 yards—a race between Imlay and Goodman. Imlay won by a few feet, in the good time of 25 1-5 seconds on a slow track. Bower came in third.

Probably the most exciting event in the afternoon was the half-mile relay, which the Soph-

omores won in the credible time of 1:39 3-5 seconds. Dawson, Schnaidt, Bates and Imlay were the members of the winning team.

Murphy again set the pace in the two-mile run. Kerr hung on for seven laps, but weakened in the last lap. The winness' time was 11 minutes and 9 seconds. Bruce was third, a whole lap behind.

Good marks were also set up in the field events. Scruby captured first in the pole vault, with the bar at 10 feet. C. E. Peterson was second, and Bates third. Goodman took first in the discus, with a throw of 92 feet and 3 inches. C. A. Peterson was second. Krause hurled the shot a distance of 31 feet 4 inches, thereby taking first. Beck and C. A. Peterson took second and third respectively.

C. A. Peterson established a new school record in the high jump, leaping over the bar at a height of 2 feet 8 inches. Scruby equaled the school record with a jump of 5 feet 7 inches for second place. Peterson displayed wonderful form in his jumping, and should go close to 6 feet by the end of the year. Bower took third place. "Big" Pete again displayed his form in the broad jump, taking first by a leap of 20 feet 10 3-4 inches. Imlay was a close second, with 20 feet 9 inches to his credit, while Aid took third with a jump of 20 feet even.

The officials: Referee, Dennie, Cole; judges at finish: Profs. Harris, McCandliss, Clayton and Radcliffe; field judges: Profs. Duffy, Hinsch and Risher; timers: McRae, Barley and Bowen; starter: Prof. Anderson; clerk of course: Ebmeyer; scorer: Koch.

Great praise should be given the Mining Association for the leaflet gotten out this week, in which the names of the men with some experience in the different mining camps are published. It can be of great help to all, and advantage should be taken of the opportunity, after such thoughtfulness on the part of the Association.

Charles L. Woods, Publisher.

Mr. Student:

Are you a Rooter or a Hooter?
Better be a Rooter than a Hooter. A
smile costs no more than a sneer and
wins more games. A pat on the
back requires less energy than a kick
in the same spot and makes more
friends. You may say to yourself,
"merit has no show nowadays," but
try it and see. Leaders are ordinary
persons with extraordinary determin-
ation. The difference between you
and your superiors is "APPLICA-
TION"—they strive for what you
wish for.

Use your intelligence, procure for
yourself NOW what might be impos-
sible to get later, a LIFE insurance
policy would be issued to you now,
but refused later when you take up a
more hazardous occupation, think it
over, then come and talk it over with
your friend, B. H. RUCKER.

The Elite

will handle Special Fruit Ice
Cream on Saturday evening and
Sunday. Special orders solicited
and delivered at all times.

SUMMER WORK.

Continued from First Page.

substituted for the Junior trip.
Only one report will be required
which must be submitted to the
Mining, Metallurgy or Geology
departments according to the
kind of work followed. It may
also be stated that according to
this ruling, either the summer
work or the Senior trip will be
required and substitutions of
Senior electives for the trip will
not be permitted hereafter.

As to the opportunities for se-
curing employment this year, al-
though I can make no definite
statements, judging from the
condition of the mining industry
and the high prices prevailing
for all the metals, no trouble
should be experienced by any
able-bodied man in securing em-
ployment. Men who are not
physically strong should not at-
tempt the strenuous job of
"mucking" but should endeavor
to find work in mills or lighter
work around the mines.

Mining Companies as a rule,
are liberal in giving jobs to col-
lege men in the summer, but
they naturally expect them to
stick for a reasonable length of
time and if they fail to do so it
is a reflection on the school from
which they came. In view of
this fact the men who go out in
the summer should realize that
it is up to them to "make good"
not only for the sake of their
own reputations but on account
of their school. Several years
ago a number of men obtained
employment in various capacities
at a certain mine. Inside of a
week all but one had quit and as
a consequence it is almost im-
possible for a Rolla man to "get
on" at this mine to-day. It is
the delight of many shift bosses
and foremen to try out college
men in the very worse possible
jobs around the mine to begin
with, and if they make good to
give them easier work later on.
For this reason and others that I
will not mention, it is often ad-
visable to conceal the fact that

one is a college man.

In deciding on Summer Work
the question of "where to go"
naturally presents itself. Shall
it be Arizona, Colorado, Utah,
Montana, Michigan, Cobalt or
Joplin? All of these different
places have their advantages and
disadvantages. The highest
wages are paid in Arizona and
Montana but these are partially
offset by the higher railroad fares
and high cost of living in these
places. Jobs are not as plentiful
in Joplin as they have been and
a man going to that district, or in
fact to any other, should be pre-
pared to "rustle" for at least
two weeks as it may take that
long to "get on." Wherever
possible the men should go where
they know someone connected
with the mines as a very slight
"pull" is often a great help in
obtaining employment.

C. R. Forbes.

THE MISSOURI MINER

A weekly paper published by the Students, in the interest of the Alumni, Students and Faculty of the Missouri School of Mines and Metallurgy, Rolla, Mo.

Entered as second class matter April 2, 1915, at the post office at Rolla, Missouri, under the Act of March 3, 1879.

Sophomore Column.

The Sophomore Class wishes to extend their thanks for the excellent showing made by the men who represented us in the class meet. Imlay and Murphy were high men for the Sophs, with Schnaidt runner up. Imlay certainly showed some speed, and could travel with the best of them at any time.

Our challenge to a baseball game still remains unaccepted, and our "hat's still in the ring."

Taafe Fleming, Leon Goldman and J. M. Morris returned Monday evening in good condition from St. Louis, where they spent the Easter holiday.

Epperson has been elected secretary and treasurer of the Y.M. C. A. for next year.

Larry Maher will write next week's column.

Patronize our advertisers.

The announcement that a course in surveying will be given for six weeks immediately after commencement should be very attractive to all freshmen. In these six weeks of summer school you can get plane surveying, topographical surveying and railroad surveying.

Plane surveying is a sophomore subject which requires nine hours work a week for the first semester. It is a general course in surveying which includes the adjustments, uses and limitations of the transit, level and the minor instruments.

Topographical surveying is a course which the mining men take at the beginning of their Junior year a week before school opens.

Railroad surveying is a Junior subject which treats of the theory and practice of surveying as it appertains to the location, construction and maintenance of railroads. It requires five hours work a week.

A large number of freshmen should take advantage of this summer course for it affords a good opportunity to lighten both the sophomore and junior work. It also will give one an opportunity to make up any work which he may be delinquent in. For instance any one who has not passed freshman chemistry would avoid a conflict by taking this summer course and eliminating plane surveying. This would leave him three afternoons a week to do his chemistry laboratory work during the first semester of his sophomore year. But even if he is not behind in his work he could take advanced work on these afternoons thereby decreasing his junior work. Taking all in all this is one of the best opportunities yet offered in a summer course and should attract a large number of men. It is a case of all to gain and nothing to lose.

E. M. Johnson, '92, is smelter superintendent at Henrietta, Okla.

Junior Notes.

Wm. Kahlbaum is now in the employ of the Granby Mining and Smelting Co. plant at E. St. Louis. His address is 4017 Linden Ave., E. St. Louis.

P. B. Shotwell, who has been at Webb City doing some mining work, will leave shortly for New Mexico or Arizona. He reports that jobs are to be had around Webb City, but there are no positions. To those who might be considering the idea of working near Webb City this summer he says that the foremen do all the hiring at the mines and there is no use in writing before hand.

Raffie Dale spent the Easter holidays visiting relatives in that part of southern Illinois known as Egypt.

H. A. Kluge hunted Easter eggs in Collinsville, Ill., last Sunday.

K. Aid and J. K. Walsh took a run down to the big city to spend the holidays in an appropriate way.

It has been definitely decided that the Junior Trip credit may be substituted for with credit which may be obtained by summer mining work. A full plan of the scheme will be published in a short time.

T. R. Crawford spent the week-end in Pittsburg, Kan.

Joe Wilson and "Lego" Ambler were down to St. Louis, where they visited several of the local amusements in order to get ideas for finishing touches to "Bricks and Barons."

Junior Metallurgy will replace Ore Dressing and Civil Masonry Monday and Tuesday morning, May 1st and 2nd. E. C. Hynes will deliver an interesting talk to the Junior Metallurgy Class on Monday morning. This will be of intense practical value.

Locals.

Reginald Dean, '15, has been appointed instructor in chemistry in Harvard University, to begin next September.

Oklahoma Aggie-Miner Game Called Off.

Last Tuesday the Miners faced the strong Oklahoma Aggie team in the second game of the local season. As usual, the sky was clouded, and light showers were falling, which gradually turned into a steady rain, necessitating the calling off of the game at the end of the fourth inning.

Zeuch, Leonard and "Brandy" were given erratic support, and consequently the Aggies were running wild. The Miners could do little against the Oklahoma pitcher, but managed to squeeze over a lone tally as their share of the score. The Aggies had amassed a total of ten runs when the game was called. The way they hit reminded one of the slug-fests we used to indulge in when we were kids. We aren't sore that the game was called off.

The visitors left for Columbia, Mo., where they play Missouri U., and the Miners boarded the "rattler" for Pittsburg, Kansas, where they play the Pittsburg Manual Training School. From there they jump to Fayetteville, Ark., for two games with the Razorbacks. They will return Sunday, and get in trim for C. B. C. on May 3rd and 4th.

Corsairs 17; McDermott's 12.

The Corsairs, last year's Allison cup winners, were returned the victors in the second game in the Allison-Bentley series. It was a slug-fest, pure and simple, with the Corsairs having a slight edge over their opponents.

The McDermott crowd had Epperson in a few tight places, and Young, who relieved him, fared little better. "Dutch" Krause was given poor support by his outfield and many singles went for two and three-baggers. The Pirates hit more consistently thruout the entire game. Williams showed up good in the catcher's position.

Worth Bates, ex-'05, is with the Missouri Gas and Electric Service Co., Lexington, Mo.

Alumni Notes.

Frank H. Seamon, '91, Professor of Chemistry in the Texas School of Mines at El Paso, has an article on the "Detection and Determination of Tellurium," in The Crucible, February, 1916.

F. G. Moses, '14, has gone to Platteville, Wis., for the General Engineering Company, in connection with the installation of the Callow Flotation Process in the Vinegar Hill Zinc Company's plant.

The Mining and Engineering World of April 22, 1916, has an abstract from the annual report of D. C. Jackling, Managing Director of the Chino Copper properties. The average contents of the ore was 2.155% copper. 158,444 tons of concentrates were produced. The average milling cost was 54.19 cents per ton, a decrease of .82 cents from the previous year. The total output of copper was 68,000,000 pounds. Average net cost was 7.12 cents per pound.

Prof. C. Y. Clayton and C. E. Peterson, '16, have a paper on "Oils for Flotation," in the Mining and Scientific Press for April 22, 1916, pp. 598-601, giving the value of 133 oils tested for flotation purposes.

Miners 11, Pittsburg 2.

Pittsburg, Kas., April 26. — The School of Mines baseball team defeated the Manual Training nine by a 11-2 count. Golick pitched air-tight ball, and only one error was made by his teammates. The Miners made fifteen hits.

Miners Win Second Game.

Pittsburg, Kans., April 27.

Miners won the second game with the Manual Training team by a score of 7-5. Zeuch, Hill and K. Wilson were the batteries for the Miners.

Senior Notes.

Nathanial M. Lawrence left Monday night for Tulsa, Oklahoma, where he expects to spend some time on personal business.

Fred Grotts and Reginald Dean returned last Monday from Illinois U. where they attended a meeting of the American Chemical Society.

Octavius Lumaghi has lost himself in the wilds of St. Louis. We expect him back soon.

Greene Erskine made a flying trip to St. Louis last week.

Louis Turnbull went to St. Louis last Saturday and returned Tuesday.

Earl Jones, '16, who is working in Joplin, spent Easter in Rolla.

Seniors Attention: Friday at 7. p. m. in Parker Holl, there will be a meeting of the Senior Class which will probably be our last meeting because there are several important matters to be discussed. Please be prompt so that we may attend the first picture show in a body (for the last time.) Bring your class dues with you if you want your name on the plats.

Addressed American Chemical Society.

The American Chemical Society met at the University of Illinois last week. It was attended by nearly a thousand prominent chemists from all parts of the United States. Many demonstrations were made and lectures were given and papers read, of an instructive character.

Among those who attended the meeting from the School of Mines were Professors V. H. Gottschalk and J. C. Ingram and Reginald Dean, O. L. Lumaghi and Fred Grotts.

Professor Ingram and Reginald Dean were both on the program and we are pleased to state that they did credit to themselves and brought honor to the institution of which they were representatives.

Subscribe for the Miner.

Freshmen Notes.

Each member of the class should see Mr. Dowd within the next week and pay the class assessment covering expenses incurred St. Pat's day. Do not wait until he has to ask you for the assessment. Let's have all dues paid, and all bills against the class paid before the close of school.

F. V. Moore spent Easter Sunday in Festus, Mo., visiting with his mother.

Fred Deckmeyer, M. Brazil and W. Lottman spent Easter Sunday in St. Louis, visiting.

Some member of the qualitative chemistry class has devised a new formula for magnesium mixture. The discovery is the result of hours of idle thinking and a recent experiment, however, proved that the mixture will not give the proper reactions in testing for arsenic.

The course in surveying, to be offered during the summer term should be of interest to a number in the class. This course will offer an opportunity to pass a full year's surveying work in six weeks. Those who can stay and take the work should not delay in signing up.

The Interclass track meet, held last Saturday, was a success from two points of view: First, because we were victorious, and second, because it brought out the good track material, not only in our class, but in the whole school. Our principal point winners were Goodman, Scruby, Gill, and Krause. The Freshman took six firsts, seven seconds, and five thirds making a total score of 56 points.

J. G. Wilson, H. A. Ambler and J. M. Morris attended the annual convention of the 11th division of the Sigma Nu Fraternity, which met with the Washington University chapter at St. Louis last Friday and Saturday. Delegates from Missouri University, Washington University, William Jewell, Arkansas and Rolla were present.

The Parish Players.

Early part of January.

The Parish Players present: First, an exceedingly strong drama; second, a high standard comedy; and third, a poetic fantasy, which carries one back to the fabled forests of dreams. These are four well known actors:

Miss Fern Doubleday, a brilliant young actress of great personal charm and vivacity, has appeared in several repertoire companies, and has won honors in interpretative aesthetic dancing, lyric pantomime, and musical comedy.

Mr. Earle Russell is well known as a comedian and character impersonator, having been successful as "The Sultan" in "The Sultan of Sulu," as well as other important characters in the plays from the writings of Mr. Geo. Ade,

Mr. Hugh Wheeler Carel has appeared with some of the best metropolitan companies, such as "The Spenders." His discriminating versatility won for him a prominent place with the American Film Co.

Mr. Fritz Schlenmer has recognized ability as a painter, and a master of lighting effects. He has been one of the student instructors of the Art Institute, Chicago, where he won honorable mention many times. His abilities applied to color combination and lighting insure exceptionally pleasing stage pictures and scenes

The staging for this company was executed by Dodge & Castle Studios, N. Y.; and the lighting effects are from the celebrated Klerly Studios, N. Y., the same masters of lighting who produced the wonderful effects of "The Garden of Allah," and "Kismet," for the great New York Hippodrome.

W. E. HANS, Prop.

D. P. Hynes, '08, who is associated with H. L. Hollis, consulting mining engineer, of Chicago, is here doing some research work in connection with some of the propositions they are handling. Mr. Hynes is accompanied by his wife and daughter.

Geo. Bland, '04, and John Bland, ex-'12, are running a concentrating mill at Hill City, S.D.

Redpath Lyceum Bureau, while presented as a monologist, is all that and more. His entertaining purpose programs are truly entertainments with great purposes. He impersonates, and yet he does not. He presents his characters of real men and women, without costumes or make-up accessories. He is in no way mechanically offensive. Probably the strongest point in his work is the message that he brings to the audience. His entertainment is the sermon without the preacher, the lecture without the lecturer, the drama enacted without the actors and stage papers.

The Musical Guardsman,
March 5.

The Musical Guardsmen is a singing orchestra of six men. Ask any number of people what music they most thoroly enjoy, and the answer nearly always will be: A good male quartet, with plenty of good close harmony, and for variety let them play instruments. Even more

pleasing would be a man's chorus, a male quartet with two additional voices for fuller harmony, and then a men's orchestra, with a great variety of instruments, playing marches, otures, popular medleys, and late song hits. You cannot conceive of a company or program more pleasing, more popular than such a singing orchestra. This is just what you find in the Musical Guardsmen.

When they come marching out, sing that rousing, cheering chorus, play that prancing military march, you will find them the most popular company ever in Rolla. They hit the high spots, everybody has a good time. You pat your foot, keep time with the music, and you want to sing. You get more close harmony than a male quartet, more rollicking action than a college glee club, and as many laughs as a home town minstrel.

As you will note, the course this year is a well balanced

course, having interstitial a good lecturer, which majors in that which we like best in an entertainment, music. The sale of seats for the season will begin the second week in September, and every Miner armed with a ticket is prepared for some good entertainment during the whole school year. "Armed Preparedness" is the effectual way of holding off the germ army of our enemy, lack of variety in our daily life.

Y. M. C. A. Officers.

At a general meeting of the Y. M. C. A. which was held Tuesday night in Parker Hall, the following men were elected as officers for 1917:

Pres. H. A. Horner, '17; Vice Pres., C. W. Hippard, '17; Sec. Treas., C. L. Epperson, '16; Faculty Advisor, Prof. Forbes.

The new president will appoint his cabinet at some later date.

Send the MINER home. The folks will be glad to get it.

Do Not Delay!

Do It Immediately!

SENIORS!

Don't leave town this Spring without leaving a dollar for next year's Miner.

We think that you (from force of habit) would not feel like eating your Friday evening dinner without having glanced through the Miner first.

See any one of the Staff. They will all take your money.

ALUMNI!

We also know that you will miss the Miner terribly next year if you do not subscribe.

Get your dollar in now, so that you will be sure of getting the first number of the Miner next fall.

Cut this and mail today.

MR. M. L. TERRY,
Business Manager Missouri Miner,
ROLLA, MO.

Dear Sir:
